Intense Pulsed Light or IPL uses light-based technology to treat the appearance of sun-damaged skin, fade dark spots, freckles, hyperpigmentation, acne scars, reduce large pores and diffuse redness caused by broken capillaries or Rosacea.

Treat discolouration and other signs of premature ageing without surgery or downtime. Intense pulsed light is used selectively to target pigmented and vascular lesions resulting in a noticeably clearer, brighter skin with a more even complexion. It also enhances collagen production to reduce skin laxity, erases fine lines and faces the appearance of wrinkles.
